

V. CAUSAL FACTOR ANALYSIS AND MANAGEMENT RECOMMENDATIONS

The Local AMRTs are tasked with completing a causal factor analysis and provide management recommendations associated with each population or habitat trigger. The results from this process are provided below in a *Causal Factor* table for each Conservation Planning Area. SETT staff levels were insufficient to follow up on each recommendation given in 2019, a selection of recommendations were chosen and a progress update is included in the table.

5.4 SANE CONSERVATION PLANNING AREA (POINT OF CONTACT – SANE, C/O ROBIN BOIES)

2019 Recommendation follow up	
2019 Recommendation	Progress
O'Neil Basin PMU: Complete O'Neil Basin PMU	New programmatic EIS for fuels and vegetation restoration makes the O'Neil Basin PPA unnecessary. Projects may be tiered to PEIS.
O'Neil Basin PMU: Complete NEPA and Implement EA for HV-11*	No progress
O'Neil Basin PMU: Complete NEPA and Implement CA-5*	No Progress
O'Neil Basin PMU: Complete NEPA and Implement CW-2*	No progress

*Please see the SANE Conservation plan for specific project details available at <http://www.saneconservation.org/documents.html>
